“Ensuring Comfort and Safety for Children in Hospital”

A children's bed is an important element in children's care in the hospital. The design of the bed must focus on safety and comfort, helping the medical team provide optimal care, and ensuring that the child feels safe and comfortable during treatment.

The MBC02 is specifically designed to meet the needs of children in the hospital, aligned with the ergonomics of the medical staff's performance.

Specially designed for the right body size and ergonomic design. Made with durable and easy-to-clean materials, the MBC02 is a hygienic and sterile bed to minimize the risk of infection.

Back Rest & Knee Rest

The back and leg positions can be adjusted to increase the child's comfort and facilitate certain medical treatments. Equipped with simple manual controls, bed operation becomes more practical and efficient

Manual adjustments.

- Backrest setting: 0° - 75°
- Footrest setting: 0° - 25°

Handle Back Rest & Knee Rest

Simple manual control with a crank lever makes it easier to adjust the Back Rest and Knee Rest, making it more practical and efficient.

Telescopic Side Guard

Safe Side Protection: Equipped with adjustable side protection up and down, we prioritize patient safety by preventing falls while sleeping or playing in bed.
